Production of plastic products

Despite significant barriers, today there are already a number of areas where industrial design begins to be actively involved: the production of various plastic products, and also production of special equipment, sporting goods, medical equipment, furniture, lamps, home and office products. Among other growth drivers you can to note the growth of innovative industries, including in the framework of technology parks, as well as quite active development of engineering, including with the support of the state. Demand for services domestic industrial designers can be further supported by cultural Market for Industrial Design Services four national factor, that is, a deep understanding of the particular needs Russian customers. As for the geographical features of the Russian market, the leaders are estimated experts, naturally, are Moscow and St. Petersburg, where most of design companies. Leaders among the regions are large industrial cities, such like Ekaterinburg, Nizhny Novgorod and Izhevsk.
